

Case :
59

Country :
Belgium

Sector :
Industrial cleaning

Company :
A Belgium based company specialized in the transportation and treatment of animal remains.

Type of intervention :
Logistics : planning.

Project Goal:
EffCo worked in the transportation department.

What did we do?

- The “washing” time of the trucks got reduced and was now being done by cheaper temps.
- The spare parts warehouse got re-organized and the location and stock level of each part got mapped on the computer.
- Old parts were sold.
- Old trucks made more kilometers than newer ones. This was reversed. Each truck was put into a database for planning purposes.
- A personnel planning was designed along with a “route planner” that also indicates which truck needs to be in the garage. The transport manager gets a weekly plan-actual report.
- One single person was made responsible for stock, suppliers and warehouse management.

Results :
We improved planning and reduced overtime drastically.
