

Case :

62

Country :

The Netherlands

Sector :

Construction

Company :

An engineering department responsible for monitoring progress and budgets of all civil engineering work and maintenance concerning the airport (strips, stairways, ramps, isolation,...)

Type of intervention :

Feasibility study : quantification improvement potential.

Project Goal:

Identify improvement potential in order to generate more turn over, a higher contribution, more time for training and development and more transparency.

What did we do?

We conducted a 3-week feasibility study, concentrating on management styles and their impact on the overall efficiency of the organization.

Results :

We identified a efficiency improvement potential of € 250.000 => 325.000
